Agenda

- Overview of Scopus
- Scopus content and selection criteria
- Profiles in Scopus
- Bibliometrics available in Scopus
- Three use cases: on-line demonstration

Overview of Scopus: content and selection criteria

What is included in Scopus?

The **largest abstract and citation** database of **peer-reviewed** literature, and features smart **tools** that allow you to **track, analyze and visualize** scholarly research.

Over **70 million records** from ca. **23k** peer-reviewed journals and **150k** books

- Over **5k** international publishers
- “Articles in Press” from ca. 8000 journals
- Publications in 40 different languages
- Over 3600 active Gold Open Access journals
- Over **39 millions** patents
- Records dating back to 1823
- Updated **daily**

What is included in Scopus?

Scopus data is the highly structured content that is searchable through Scopus.com

JOURNALS

22.8k peer-reviewed journals
280 trade journals

- Full metadata, abstracts and cited references (ref's post-1995 only)
- Funding data from acknowledgements
- Citations back to 1970

CONFERENCES

+100k conference events
8M conference papers

Mainly Engineering and Computer Sciences

BOOKS

560 book series

+130k stand-alone books

20k titles added annually

Focus on Social Sciences and A&H

PATENTS

39M patents

From 5 major patent offices

- WIPO
- EPO
- USPTO
- JPO
- UK IPO

That has been enhanced with

- **Deep citation linking** for all articles 1970-present
- Authoritative **Author & Affiliation Profiles** for all records 1823-forward
- Additional **enhanced metadata**, ex. Medline & other index terms, Funding Acknowledgements, etc.

Content Selection & Advisory Board (CSAB)

The CSAB is an independent board of subject experts from all over the world. Board members are chosen for their expertise in specific subject areas; many have (journal) Editor experience.

Transparent Scopus selection criteria for serial content

All titles should meet all minimum criteria in order to be considered for Scopus review:

Peer-review

English
abstracts

Regular
publication

Roman script
references

Pub. ethics
statement

What are the selection criteria?

All titles should meet all minimum criteria:

Peer-review

Abstracts in
English

Publication
schedule

References in
latin alphabet

Ethics
declaration

Titles fulfilling the formal requirements are then analyzed by **Content Selection & Advisory Board** with respect to **14 qualitative and quantitative selection criteria**:

Journal policy

- clear publishing policy and concept
- clear peer-review regulations
- geographical diversity: authors, reviewers and editors from various countries

Content quality

- academic input into the given research areas
- clarity of abstracts
- content is in agreement with the declared policy
- good content quality
- readability of the articles

Prestige of the journal

- cited by journals already indexed in Scopus
- publisher's reputation

Publication schedule

- regularity of publishing
- no delays and all issues published as declared in the schedule

On-line access

- content is available on-line
- website in English
- good quality of the website

Profiles in Scopus

Institutional profiles in Scopus

- Each institution with at least one affiliated author is given a unique ID number to which all papers published in indexed journals are linked, assuming an author indicated this affiliation as his/hers;
- Profile of an institution includes:
 - Complete name and its variations, including local language names and former versions, as well as mis-spelled;
 - Current address;
 - Number and a list of all documents, patents and affiliated authors;
 - List of co-authors' institutions and countries, as well as a list of journals in which affiliated authors publish;
 - Information about research fields covered by the affiliated authors.

Author profiles in Scopus

- Each author is assigned a unique ID number, to which all his papers, books and patents are linked once they are added to Scopus;
- Author's profile includes:
 - Name and surname, including all aliases and alternative names (including spelling errors, maiden surnames etc.);
 - Affiliation indicated in the most recent indexed publication;
 - Number of documents, citations and co-authors list and number (up to 150);
 - Current value of h-index along with tools for its analysis;
 - List of documents;
 - Information regarding scholarly activity (period of time) and field of research.

ORCID - Open Researcher and Contributor ID

- Unique and free-of-charge individual researcher ID number;
- Allows to track academic and research career, achievements and resulting publications;
- Can be synchronized with Scopus.

Available bibliometrics and analysis tools

Journal-level bibliometrics

CiteScore

It is a ratio of citations in a year (Y) to documents published in the three previous years (Y-1, Y-2, Y-3) divided by the number of documents in those same years.

SNIP – Source Normalized Impact per Paper

It is defined as the ratio of a journal's citation count per paper and the citation potential in its subject field. It aims to allow direct comparison of sources in different subject fields.

SJR – SCImago Journal Rank

SJR is a measure of scientific influence of scholarly journals that accounts for both the number of citations received by a journal and the importance or prestige of the journals where such citations come from. It is a variant of the eigenvector centrality measure used in network theory.

Article-level bibliometrics

Citation Count

838

Cited by in Scopus

Indicates how many times a paper was cited (according to data in Scopus)

Field-Weighted Citation Impact

58.58

Indicates how well the paper is doing in comparison to others in the same field. The numerator contains the number of citations and the denominator contains the expected citation count, typical for an average paper in the field. FWCI above 1 indicates the paper is above average. Data from SciVal.

Citation Benchmarking

98th percentile

Compared to Multidisciplinary articles of the same age

Indicates how the paper compares with others. Citation data is collected for a period of 18 months and is compared with at least 2.5k papers of the same type and from the same field.

Mendeley

56 Readers

This shows how many Mendeley users have this paper in their libraries. It's an indication on readability of the paper.

About Compare journals calculations

On-line examples

Example 1

I want to find papers on sol-gel synthesis of natural gels. Preferably the papers should be not older than five years and I would be happy to focus on review papers. Is there a way of exporting their bibliographic data easily?

Example 2

I'm a rector of Kaunas Technical University and I would like to know who among my researchers is the most active in the field of physics. I would like to analyse his or hers scholarly output.

Example 3

I would like to publish a paper on benefits of using natural fertilizers in agriculture. I'm looking for a good journal which will be suitable to publish in and that it will be a good long-term investment of my time and resources.

Thank you for your attention!
